Item #12 Remarks

The water from this underground source will be utilized during the haul road construction to supplement those waters not obtained from surface runoff and Woodruff Springs.

This water will also be used after the haul road has been completed for other Mining, Milling and Domestic uses. Therefore, this application is not for a temporary use of water.

The estimated consumptive use is 100,000 gallons/day \times 180 days = 18 million gallons/annum or 55.24 acre feet/annum.

The place of use describes the sections which the haul road will pass through. The actual place of use will be that portion occupied by the construction of the road, associated structures and mining and mill sites.

The manner of use of water under this permit is by nature of its activity a temporary use and any application to change the manner of use granted under this permit will be subject to additional determination and evaluation with respect to the permanent effects on existing rights and the resource within the ground water basin. The issuance of this permit does not waive the requirements that the permit holder obtain other permits from State, Federal, and local agencies.
